

## **WHAT IS PLUTO™?**

The Primary Land Use Tax Lot Output (PLUTO™) data file was developed by the New York City Department of City Planning's Information Technology Division (ITD)/Database and Application Development Section. It contains extensive land use and geographic data at the tax lot level in ASCII comma-delimited borough files. Each file contains the tax lots within the borough.

The PLUTO tax lot data files contain over seventy data fields derived from extracts of mainframe data files maintained by the Department of City Planning (DCP), Department of Finance (DOF), Department of Citywide Administrative Services (DCAS), and from information contained in Landmarks Preservation Commission (LPC) publications and web site. The ITD/Database and Application Development Section has also created additional fields based on data obtained from one or more of the major data sources. PLUTO data files contain three basic types of data:

- Tax Lot Characteristics;
- Building Characteristics; and
- Geographic/Political/Administrative Districts.

There are two idiosyncrasies regarding the tax lot data. The PLUTO data contain one record per tax lot except for condominiums. PLUTO data contain one record per condominium complex instead of records for each condominium unit tax lot. A tax lot is usually a parcel of real property. The parcel can be under water, vacant, or contain one or more buildings or structures. The Department of Finance assigns a tax lot number to each condominium unit and a "billing" tax lot number to the Condominium Complex. A Condominium Complex is defined as one or more structures or properties under the auspices of the same condominium association. Consequently, before the development of the PLUTO data, comparing Department of Finance tax lot data was difficult in study areas that contain both condominiums and other types of real property. To improve this situation, DCP summarized DOF's condominium unit tax lot data so that each Condominium Complex within a tax block is represented by only one record. The Condominium Complex record is assigned the "billing" tax lot number when one exists. When the "billing" tax lot number has not yet been assigned by DOF, the lowest tax lot number within the tax block of the Condominium Complex is assigned.

The second idiosyncrasy is related to borough and community district geography. Two portions of the City, Marble Hill and Rikers Island, are legally located in one borough but are serviced by another borough. Specifically, Marble Hill is legally located in Manhattan but is serviced by The Bronx, while Rikers Island is legally part of The Bronx but is serviced by Queens. Therefore, Marble Hill tax lots are located in the Manhattan borough file and Rikers Island tax lots are in The Bronx borough file. .

The PLUTO data is updated twice a year. Check the City Planning web site, [www.nyc.gov/planning](http://www.nyc.gov/planning) for update status. The date of the eight source data files and the base map used to create PLUTO14v1 are:

## PLUTO 14v1 - DATES OF DATA

SOURCE	DATE OF DATA
Department of City Planning - Political and Administrative Districts	April 2, 2014
Department of Finance – Digital Tax Map	May 1, 2014

Changes, since PLUTO Release 13v1 are appended to this document. This appendix includes new Special Districts and new Historic Districts; and the number of rezonings, their names and number of tax lots affected by the rezonings in this release.

City Planning also merged the PLUTO data with the DCP modified version of the DOF's Digital tax map to create MapPLUTO for use with various geographic information systems. For more information on MapPLUTO see the DCP web site [www.nyc.gov/planning](http://www.nyc.gov/planning).
